SPECIFICATIONS

PXIe-6547

100 MHz Digital Waveform Generator/Analyzer

This document provides the specifications for the PXIe-6547.

Hot Surface If the PXIe-6547 has been in use, it may exceed safe handling temperatures and cause burns. Allow the PXIe-6547 to cool before removing it from the chassis.

Note All values were obtained using a 1 m cable (SHC68-C68-D4 recommended). Performance specifications are not guaranteed when using longer cables.

Definitions and Conditions

Specifications are valid for the range 0 °C to 55 °C unless otherwise noted.

Maximum and *minimum* specifications are warranted not to exceed these values within certain operating conditions and include the effects of temperature and uncertainty unless otherwise noted.

Typical specifications are unwarranted values that are representative of a majority (3σ) of units within certain operating conditions and include the effects of temperature and uncertainty unless otherwise noted.

Characteristic specifications are unwarranted values that are representative of an average unit operating at room temperature.

Nominal specifications are unwarranted values that are relevant to the use of the product and convey the expected performance of the product.

All specifications are Typical unless otherwise noted.

Generation Provided Setup and Hold Times

Compare the setup and hold times from the datasheet of your device under test (DUT) to the values in the table. The provided setup and hold times must be greater than the setup and hold times required for the DUT. If you require more setup time, configure your exported Sample clock mode to Inverted and/or delay your clock or data relative to the Sample clock. This table includes worst-case effects of channel-to-channel skew and intersymbol interference.

Exported Sample Clock Offset (t_{PCO})	Minimum Provided Setup Time (t_{PSU})	Minimum Provided Hold Time (t_{PH})
1.65 ns	t_p - 2.15 ns	1.15 ns
0.0 ns	t_p - 500 ps	-500 ps

Note This table assumes the data position is set to Sample clock rising edge and the noninverted Sample Clock is exported to the DDC connector.

Waveform

Memory and Scripting

Memory architecture	This device uses the Synchronization and Memory Core (SMC) technology in which waveforms and instructions share onboard memory. Parameters such as number of script instructions, maximum number of waveforms in memory, and number of samples (S) available for waveform storage are flexible and user defined.

[25] Provides the frequency for the PLL.

Onboard memory size[26]	
1 Mbit per channel	
Acquisition	1 Mbit per channel (4 MBytes total)
Generation	1 Mbit per channel (4 MBytes total)
8 Mbit per channel	
Acquisition	8 Mbit per channel (32 MBytes total)
Generation	8 Mbit per channel (32 MBytes total)
64 Mbit per channel	
Acquisition	64 Mbit per channel (256 MBytes total)
Generation	64 Mbit per channel (256 MBytes total)
Generation	
Single-waveform mode	Generates a single waveform once, *n* times, or continuously
Scripted mode[27]	Generates a simple or complex sequence of waveforms.
Finite repeat count	1 to 16,777,216
Waveform quantum[28]	
Data width = 4	1 sample
Data width = 2	2 samples
Waveform block size (in physical memory)	
Data width = 4	32 samples
Data width = 2	64 samples

Software

Driver Software

Driver support for this device was first available in NI-HSDIO 1.6.

NI-HSDIO is an IVI-compliant driver that allows you to configure, control, and calibrate the PXIe-6547. NI-HSDIO provides application programming interfaces for many development environments.

Application Software

NI-HSDIO provides programming interfaces, documentation, and examples for the following application development environments:

- LabVIEW
- LabWindows™/CVI™
- Measurement Studio

[34] The Data Active event can only be routed to the PFI channels.

- Microsoft Visual C/C++
- .NET (C# and VB.NET)

NI Measurement Automation Explorer

NI Measurement Automation Explorer (MAX) provides interactive configuration and test tools for the PXIe-6547. MAX is included on the NI-HSDIO media.

Compliance and Certifications

Safety

This product is designed to meet the requirements of the following electrical equipment safety standards for measurement, control, and laboratory use:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA C22.2 No. 61010-1

Note For UL and other safety certifications, refer to the product label or the *Online Product Certification* section.

Electromagnetic Compatibility

This product meets the requirements of the following EMC standards for electrical equipment for measurement, control, and laboratory use:

- EN 61326-1 (IEC 61326-1): Class A emissions; Basic immunity
- EN 55011 (CISPR 11): Group 1, Class A emissions
- EN 55022 (CISPR 22): Class A emissions
- EN 55024 (CISPR 24): Immunity
- AS/NZS CISPR 11: Group 1, Class A emissions
- AS/NZS CISPR 22: Class A emissions
- FCC 47 CFR Part 15B: Class A emissions
- ICES-001: Class A emissions

Note In the United States (per FCC 47 CFR), Class A equipment is intended for use in commercial, light-industrial, and heavy-industrial locations. In Europe, Canada, Australia, and New Zealand (per CISPR 11), Class A equipment is intended for use only in heavy-industrial locations.

Note Group 1 equipment (per CISPR 11) is any industrial, scientific, or medical equipment that does not intentionally generate radio frequency energy for the treatment of material or inspection/analysis purposes.

Note For EMC declarations, certifications, and additional information, refer to the *Online Product Certification* section.

Caution Refer to the *Read Me First: Safety and Electromagnetic Compatibility* document for important safety and electromagnetic compatibility information. To

obtain a copy of this document online, visit *ni.com/manuals* and search for the document title.

Caution To ensure the specified EMC performance, operate this product only with shielded cables and accessories. Do not use unshielded cables or accessories unless they are installed in a shielded enclosure with properly designed and shielded input/output ports and connected to the product using a shielded cable. If unshielded cables or accessories are not properly installed and shielded, the EMC specifications for the product are no longer guaranteed.

Note SHC68-C68-D4 shielded cable and the provided snap-on ferrite beads, National Instruments part number 711627-01, must be used when operating the PXIe-6547.

Caution To ensure the specified EMC performance, the length of all I/O cables must be no longer than 3 m (10 ft).

Caution To ensure the specified EMC performance, you must install PXI EMC Filler Panels, National Instruments part number 778700-01, in all open chassis slots.

CE Compliance CE

This product meets the essential requirements of applicable European Directives, as follows:

- 2014/35/EU; Low-Voltage Directive (safety)
- 2014/30/EU; Electromagnetic Compatibility Directive (EMC)

Online Product Certification

Refer to the product Declaration of Conformity (DoC) for additional regulatory compliance information. To obtain product certifications and the DoC for this product, visit *ni.com/certification*, search by model number or product line, and click the appropriate link in the Certification column.

Environmental Management

NI is committed to designing and manufacturing products in an environmentally responsible manner. NI recognizes that eliminating certain hazardous substances from our products is beneficial to the environment and to NI customers.
